

```

* Density
- matrix A (no edge length sampling) = 0.11678
- matrix B      (edge length sampling) = 0.10312
- all matrices average                = 0.1196

---

* Weighted clustering coefficient
- matrix A (no edge length sampling) (mean +/- sderr) = 0.15166 +/- 0.0017757
- matrix B      (edge length sampling) (mean +/- sderr) = 0.10579 +/- 0.0014388
- all matrices                (mean +/- sderr) = 0.14898 +/- 0.0014242

* Weighted clustering coefficient mean absolute error
- matrix A (no edge length sampling) (mean +/- sderr) = 0.015772 +/- 0.00068698
- matrix B      (edge length sampling) (mean +/- sderr) = 0.043347 +/- 0.0011953

---

* Node connectivity
- matrix A (no edge length sampling) (mean +/- sderr) = 35.735 +/- 0.67949
- matrix B      (edge length sampling) (mean +/- sderr) = 31.556 +/- 0.76772
- all matrices                (mean +/- sderr) = 36.598 +/- 0.55273

* Node connectivity mean absolute error
- matrix A (no edge length sampling) (mean +/- sderr) = 4.9273 +/- 0.228

- matrix B      (edge length sampling) (mean +/- sderr) = 6.7191 +/- 0.25881

---

* Connectivity distribution
- matrix A (no edge length sampling) (mean +/- sderr) = 0.003268 +/- 0.00054335
- matrix B      (edge length sampling) (mean +/- sderr) = 0.003268 +/- 0.0005234
- all matrices                (mean +/- sderr) = 0.003268 +/- 0.00046394

* Connectivity distribution mean absolute error
- matrix A (no edge length sampling) (mean +/- sderr) = 0.0012312 +/- 0.00019855
- matrix B      (edge length sampling) (mean +/- sderr) = 0.0016917 +/- 0.00025653

---

* Betweenness centrality
- matrix A (no edge length sampling) (mean +/- sderr) = 338.94 +/- 18.394
- matrix B      (edge length sampling) (mean +/- sderr) = 328.01 +/- 22.305
- all matrices                (mean +/- sderr) = 314.2 +/- 12.307

* Betweenness centrality mean absolute error

- matrix A (no edge length sampling) (mean +/- sderr) = 86.183 +/- 6.5604
- matrix B      (edge length sampling) (mean +/- sderr) = 120.09 +/- 10.468
